

Technical Manual

ABC Technologies — Installation, Configuration & Troubleshooting Guide

1. Installation

1.1 System Requirements

- Desktop app: Windows 10/11 (64-bit) or macOS 12 (Monterey) or later
- Browser app: latest two versions of Chrome, Firefox, Edge, or Safari
- Minimum 4 GB RAM, 500 MB free disk space
- Stable internet connection (minimum 5 Mbps recommended)

1.2 Installation Steps

- Download the installer from **portal.abctechnologies.com/download** for your operating system.
- Run the installer and follow the setup wizard. Administrator privileges are required on Windows; macOS may require approval in System Settings > Privacy & Security.
- On first launch, sign in with your registered email and password to activate your license.
- If activation fails with error **ERR-AUTH-100**, confirm your subscription is active in Account Settings, then retry. This error means the license server could not verify an active subscription for the account.

2. Login Issues

2.1 Common Login Errors

Error Code	Meaning	Resolution
ERR-LOGIN-401	Incorrect email or password	Use 'Forgot Password' to reset credentials
ERR-LOGIN-403	Account locked after 5 failed attempts	Wait 15 minutes or reset password to unlock immediately
ERR-LOGIN-409	Account already signed in on max devices (3)	Sign out of another device, or upgrade plan for more seats
ERR-LOGIN-500	Server-side authentication issue	Retry after 5 minutes; contact Technical Support if persistent

Password reset emails are sent from no-reply@abctechnologies.com and expire after **30 minutes**. If the email does not arrive within 5 minutes, check the spam folder before requesting a new one.

3. File Upload Crash Troubleshooting

Application crashes during file upload are most commonly caused by one of the following:

- **File size limit exceeded:** Basic and Professional plans limit individual file uploads to **250 MB**; Enterprise plans allow up to **2 GB**. Exceeding this triggers crash code **ERR-UPLOAD-413** rather than a graceful error in app versions prior to 4.2.1.
- **Unsupported file type:** only .pdf, .docx, .xlsx, .csv, .png, and .jpg are supported. Other file types may cause the upload handler to crash with **ERR-UPLOAD-415**.
- **Corrupted or partially downloaded file:** re-download or re-export the file and retry.
- **Outdated app version:** versions before 4.2.1 have a known memory leak during large file uploads (over 100 MB) that can crash the app. Update to version 4.2.1 or later via Settings > Check for Updates.
- **Browser cache corruption** (browser app only): clear the browser cache and cookies for the portal.abctechnologies.com domain, then retry.

If a crash persists after updating to the latest version and confirming file size/type are within limits, collect the crash log from Settings > Diagnostics > Export Logs and attach it to a Technical Support ticket.

4. Configuration Issues

4.1 Workflow Automation Not Triggering

- Confirm the automation is set to **Active**, not **Draft**, in Settings > Automations.
- Check that the triggering condition matches exactly (e.g. field names are case-sensitive).
- Basic plan does not support workflow automation; Professional plan allows up to 20 active automations; Enterprise has no limit.

4.2 Integration / API Configuration

- API keys are generated under Settings > Developer > API Keys and are scoped to one workspace.
- Professional plan API rate limit is 1,000 requests/hour; exceeding it returns HTTP 429.
- Webhook URLs must respond with a 200 status within 5 seconds or the webhook is marked failed and retried up to 3 times with exponential backoff.

4.3 SSO Configuration (Enterprise only)

- SSO is configured under Settings > Security > Single Sign-On and supports SAML 2.0 and OAuth 2.0 / OIDC.
- Common error **ERR-SSO-502** indicates a metadata URL mismatch between the identity provider and ABC Technologies' configuration — re-upload the IdP metadata XML to resolve.
